## FOR PERMANENT, FIRE-SAFE STRUCTURES... BUILD WITH **CONCRETE**

Concrete is the one basic building material that actually gains strength as it ages. Unlike other materials, it will not rust, rot, become termite-ridden or weaken under extreme loads or weather conditions.

Proof of the dependable performance of today's concrete is all around us... most of south Florida's buildings rest upon concrete foundations and are of masonry construction. Concrete is one of our most versatile building materials. Higher strength mixes enable architects to design with less bulk in structural framework. Precast, prestressed concrete provides standardized, factory-produced units that are hauled to the site and eliminate costly forming on the job. Prestressed roof beams for example, make possible clear spans of 100 ft. or more to provide the architect with greater design freedom, and the owner with more usable floor space free of space-robbing columns.

Sprayed concrete has proved itself ideal for swimming pool construction, and precast concrete seawalls have proved effective in holding back our ravaging tides. Unbelievable thin concrete shells for roofs, and a novel lift-slab method of pouring all floors and roof of a building on the ground and raising them into position with hydraulic jacks, are no longer dreams.

Yes, great things are happening in concrete and the future promises to be no less remarkable than the past. For 15 years, R. H. Wright & Son has been privileged to share in this growth and provide the architects, engineers and contractors with the products and services they require to build permanent beauty into Broward County with... "Concrete Mixed the Wright Way."

## THE COVER

This year The FLORIDA ARCHITECT inaugurates a new policy of presenting the work of the FAA's chapter members throughout the state. Scheduled among other buildings for the first part of 1958 are the homes of several architects. The first appears in this issue — the home of Andrew J. Forendise of Miami. This was one of the Hospitality Houses of the 62nd FAA Convention in 1956.

The FLORIDA ARCHITECT, Official Journal of the Florida Association of Architects of the American Institute of Architects, is owned by the Florida Association of Architects, Inc., a Florida Corporation not for profit, and is published monthly at 7125 S.W. 82nd Court, Miami 41, Florida; telephone: MOhawk 7-0421. Editorial contributions, including plans and photographs of architects' work, are welcomed but publication cannot be guaranteed. Opinions expressed by contributors are not necessarily those of the Editor or the Florida Association of Architects. Editorial material may be freely reprinted by other official AIA publications, provided full credit is given to the author and to The FLORIDA ARCHITECT for prior use. . . . Advertisements of products, materials and services adaptable for use in Florida are welcomed but mention of names or use of illustrations, of such materials and products in either editorial or advertising columns does not constitute endorsement by the Florida Association of Architects. Advertising material must conform to standards of this publication; and the right is reserved to reject such material because of arrangement, copy or illustrations. . . . Address all communications to the Editor, 7125 S.W. 82nd Court, Miami 41, Florida.

# Your Tax Savings in CONCRETE

The unretouched photograph at top was taken in July 1957. It shows a section of the Clearwater Causeway between Clearwater and Clearwater Beach.

The concrete paving was completed in 1927—thirty years ago—and is in excellent condition today.

Careful checking of official records show no maintenance expense on the pavement during the 30 years it has been in service!

Here is another impressive example of the low annual cost when streets, highways and freeways are paved with concrete.

With concrete—you get extra safety—wet or dry it offers dependable skid resistance.

With concrete—you get extra comfort—new type concrete assures smoother riding.

With concrete—you get extra economy—moderate first cost, plus tremendous savings

to the taxpayer because maintenance is negligible.

Concrete will stand up, year after year, under the pounding of constantly increasing traffic loads.

And remember this in connection with the nationwide plan for modern freeways. Cost of initial construction is to be borne 90 per cent by the Federal Government, and 10 per cent by the states. However, maintenance will be wholly an expense to be borne by the taxpayers of the state.

You, as a taxpayer, cannot afford to have Florida's interstate highway system paved with any material other than concrete.

## Mid-Florida Chapter

By **JOSEPH M. SHIFALO, AIA**  
President

The Mid-Florida Chapter, completing its second year of existence, is looking forward to a new year with keen anticipation of the many things it hopes to accomplish. To say simply that this past year has been a good year would not give credit to the co-operation of the chapter members, nor to the many fine accomplishments of our committees. We have grown to a chapter having 23 Corporate members, 5 Associate members and 14 Junior Associate members in the past year — and above all, have instigated a public relations program which we hope will bring to the attention of the people of the Mid-Florida area the good work that is being done by our chapter. 1958 should prove a banner year for all architects in this area if the promised outlook for the volume of construction holds true and the population increase in this area continues as it has in the past five years.

More and more people are beginning to realize that their home, their commercial building or any investment in a structure is only valued as high as the good quality of workmanship and design that an architect is able to give it. The challenge of the engineer and the scientist in this age of rockets, missiles and satellites should rouse us all to search our abilities and to see if we, as architects, are prepared to meet this new design challenge.

This past year's Awards Banquet, which met with such wide approval of all factions participating, will be expanded to include as many factions of the sub-trades as it is possible to judge, and a hope that we can terminate the banquet with a Benux Arts Ball.

The Ladies Auxiliary continues to keep our chapter members alert to the obligations that we have to our profession by the splendid attendance they have in their own group. With out their help chapter activities could not enjoy the interest which has been shown.

A new year is a new load of work for all members and may we shoulder the responsibility and make our chapter one of the most active in Florida.

## Mid-Florida Auxiliary

By **MRS. ANN R. SHIFALO**  
President

The Ladies Auxiliary of the Mid-Florida Chapter is embarking on a program which, it is hoped, will complement the work of our Public Relations Committee. This year, our members are being invited to join and participate in the various civic groups which are formed for the betterment of our community, and to offer within these groups the assist-

ance of the architect and his varied training.

Our Program Chairman has promised us speakers for each auxiliary meeting that will broaden the scope of our understanding in all fields. The responsibility of the "Architect's wife" to the profession should be the continual promotion of a better under-

# *Coming up--* A NEW RECORD for Lift Slab Construction

This month construction will start on a dazzling new cooperative apartment at Golden Isles in Hallandale. This glass-and-aluminum tower to the sun was designed for Lift Slab — and when its penthouse roof has been anchored into place, more than 150 feet above its entrance, it will become the highest Lift Slab structure in the world . . . Because of Lift Slab, the 90,000 square feet of its 14 floors and roofs will be poured, lifted and anchored in place within 90 days — another time-and-money-saving performance over conventional construction.

standing of the work of the architect, and to further this aim, we have formed a list of speakers from both the Auxiliary and from the Chapter which will be available to all civic bodies.

A further responsibility is to assure that we have done everything possible to permit our men folk to attend each meeting.

Many outings are planned for 1958 and the friendship and understanding which should result will build a better Mid-Florida Chapter.

## Daytona Beach

By CRAIG J. GEHLERT, AIA

President

Stimulated by the rapid growth of our Chapter, a new policy was formulated last year to combine our normal monthly meetings into six well-planned specific programs of interest every other month. It is the aim for the coming year of our Chapter to provide an atmosphere of interesting and provoking discussions so our members will become better acquainted with all aspects of our community.

One of our main emphases of progress is the instigation of a new subcommittee on Zoning and Planning under the Community Development Committee as one effort toward dealing with the severe growth ex-

# How to build "cold-snap comfort" into a Florida house the best and cheapest way ...

## Include a flame-type "Florida furnace" in the plans!

Every survey proves all over again that permanently-installed flame-type equipment is the most efficient and economical answer to the Florida home heating problem. Using cheap fuel, flame-type heating equipment pushes positive, circulating warm air all through the house at lowest cost.

By including a flame-type "Florida furnace" in the plans of your houses you are extending indoor comfort to every day of the winter for your clients.

Call on us for any information you may need on permanent flame-type home heating.

1827 S.W. 8th STREET, MIAMI

## Daytona Beach . . .

(Continued from Page 2)

gent throughout the area. We feel that this is an extremely important subject for our profession to study and advise — not only as architects with a view toward the future development of the capacities of our town, but as interested citizens who will be judged accordingly by our effort. We hope to be sufficiently ready when the anticipated hiring of the services of a City Planner for the Daytona Beach area is made in the near future.

In view of the success of our Beaux Arts Ball in honor of the Centennial last year, we intend to continue and develop this as the Chapter's annual social affair, from year to year.

This year, as in the past, we will endeavor to give freely of our interest to other groups of the building industry to coordinate better relationships and understanding of our mutual problems. Relative to this we recently participated in a combined panel discussion arranged by our local building exchange. Various problems of all aspects of this industry were placed before the panel open to the public. As a result, not only the building trades and architects achieved a better understanding, but also the general public was able to perceive the various functions and responsibilities of the profession and industry to each other.

With only a few of the important items listed above on the agenda, we look forward to a lively and interesting year — one which should see our Chapter continue its growth, not only in membership, but in service to its client, the community.

# Jacksonville Chapter

By THOMAS E. EWART, JR., AIA

President

Starting in 1956, our chapter year, the Jacksonville Chapter vigorously pursued a program of community service. Having met with great success in our efforts to convince the citizenship to back needed capital improvements, we naturally proceeded into 1957 with the foundation laid for a solid public relations program. The year 1957 saw an increasing number of members participating in radio and television forums and speaking to civic, fraternal and educational groups. By active participation in Chamber of Commerce and Junior Chamber of Commerce activities, we have strengthened the position of the architect in community affairs.

The internal organization of the chapter will receive a marked effort toward strengthening its structure and promotion of fellowship. We will strive to develop a feeling of comradeship and a unity of purpose. Better understanding among members will result in an increased tendency to express ideas that should improve our professional relations. Incorporating one social activity with personal contact undoubtedly will increase our effectiveness as a chapter.

Jacksonville is long overdue as the site for the annual FAA Convention. By 1959, new convention facilities should be available to us. In order to surpass the excellence of past con-

ventions, it will be necessary to start preliminaries now. As a first step, the formation of a ladies auxiliary is mandatory. Not only will an auxiliary be extremely helpful at convention time, but it will serve primarily as the social base for chapter activity.

Obviously, every chapter is faced with the problems of increasing membership, non-attendance, providing interesting programs and bettering public relations. To solve these problems will require more than the efforts of the executive committee alone. The membership will largely determine the degree of success which will be achieved in 1958.

## Mexican Trip Planned For FAA Members

Plans are now nearing completion for a slender architectural tour of old Mexico. The tour, planned for early spring, has been highly endorsed by architects who have taken it; and though not officially sponsored by the FAA, has the approval of that body. The itinerary as planned by the foreign service department of Eastern Air Lines includes visits to four towns from a Mexico City headquarters. Correspondence with the Mexican Architects' Society indicates that officials of that group will act as hosts

to visiting Florida architects, and an open invitation to a gala cocktail party at the Hotel Del Prado in Mexico City has been tendered. Mexican architects will also act as guides during visits to Mexico's principal architectural achievements.

The tour is being planned to include a weekend in Mexico — and thus to permit attendance at a bull fight for FAA aficionados. In Mexico City visits will be made to the Cathedral, the National Palace, the glass hectoria and the brilliantly colorful

University City. On succeeding days excursions will include trips to the famous Shrine of Guadalupe, the Pyramids of Teotihuacan, the Floating Gardens of Xochimilco, an overnight stay at the famed bath resort of Ixtapan and a trip to Tuxco, made famous by an American architect for its hand-crafted silver.

The tour will start from Miami at 9:00 a.m.; and six full days later will return from Mexico City at 11:55 p.m. Cost is low — \$213.00 per person for double hotel occupancy; \$278.00 for single occupancy. These figures in-

## *The Lurking Villian is M-O-I-S-T-U-R-E* ...the major cause of exposure-damage to wood

Over indoors, absorption of moisture by untreated wood can cause swelling, warping, surface checking and rotting—each the start of progressive deterioration. To guard against such moist misadventure, specify the use of woodwork in any building as Woodlife®—preferably by dipping or flooding. Woodlife's 'anti-wicking' action prevents moisture seepage and by penetrating the surface with an invisible water repellent so it on. Woodlife keeps wood safe and makes protection last and last and last.

Ingredients in Woodlife also protect wood from decay, fungus, stain and attack by wood-eating insects. They are also proven to reduce wood burning losses at gas, oil, fire, smoke, earthquakes and insects which feed on untreated wood.

## "A New Century Reckons..."

By LEON CHATELAIN, JR., FAIA

President, American Institute of Architects

A year ago my message to the Florida architects was prepared as we were about to embark on our Centennial year and I outlined for you our celebration plans. Much has happened since then, including a rather unexpected finale to the highly stimulating and pleasurable Annual Convention of your state association at Clearwater. Unaccustomed as my wife, Mary, and I are to having a boat sink under us,\* the experience did not dampen our enthusiasm for Florida in the slightest, and we look forward to many more enjoyable visits with you in the future.

Last year when I discussed in these columns our plans for the Centennial

to broaden the possibility of such a fabulous success. Many of you attended the Centennial convention in Washington last spring. As you know, the importance of that event was recognized not only nationally but inter-

to elevate perceptibly the prestige of the Institute here and abroad.

In planning the program we set our sights high. What we presented was of interest not only to ourselves, but to the public as well—as was amply demonstrated by the broad coverage

we received in the press, national magazines, and on TV and radio. While none of us is foolish enough to use press clippings as a yardstick as which to measure success, they pointed us by the thousands; nonetheless we are extremely grateful to know that tens of millions of persons were given the opportunity to see and hear favorable comments about the Institute and the profession.

To fully realize the overall impact of the Centennial we can multiply our success at the national level many times again at the local level, where successful chapter celebrations in all sections of the country did much to further widespread appreciation of our profession.

Our Centennial year is now history. We have basked in the limelight and have enjoyed unprecedented public recognition. We have explored the future and the vast potentialities it can hold for us. But now we must face up to the realities of the present. I'm grateful to Central States Regional Director LEON ROSS for an apt description of our task. By changing only one letter in Henry Saville's Centennial theme "A New Century Reckons" Lloyd has given us "A New Century Reckons" which expresses it exactly.

Because we are fortunate enough to live in a great democracy with an economy based on free private enterprise, we always will have competi-

tion to make available and constantly deliver a better service than

While the states protect the public from potential physical dangers through issuing licenses only to properly trained persons to practice architecture, they certainly cannot outlaw

We are not content to rest on our laurels. In this year we will seek to find out how we can reach a new objective.

building companies which comply with regulations by having a registered architect on the payroll. We know that we can do a better job than such organizations, but it is up to us to prove it to the public. Unfortunately,

incompetent job by an architect hurts the reputation not only of its perpetrator, but reflects adversely on the entire profession.

The improvement of professional competence always has been an Institute objective and many of our staff activities, as well as those of committees are directed towards elevating architectural education and training at all levels, developing new tools and techniques to assist the practitioner in his work, and making available to the membership the specific data being developed on building types and relating to the uses of new materials.

It seems to me that all of us in this period of reckoning should draw fully on our existing resources and even beyond that try and anticipate future developments so that—as far as possible—we can go out ahead by utilizing tomorrow's skills today.

(Continued on Page 28)

\*The reference is to an accident which occurred the morning of November 9, 1957 just prior to the adjournment of the 111th Annual FAIA Convention.

# 1958-A YEAR OF DESTINY

By H. SAMUEL KRUSE, AIA

When the curtain was lowered on the 43rd Annual Convention in

have sensed that the FAA was on a threshold of a new era in which more degree of integrated effort, will shape an exciting and beautiful future for the Florida Community.

The year 1958 is our year of destiny.

It is appropriate at this time to set a few goals for 1958. Listed below in outline form are, under various headings, our position as of the

ing committees, since they so aptly

## Chapter Affairs.

The work of the old Committee

ures. This having been done, it is the machinery to work

## Between Chapters

at the membership in

**CHAPTER AFFAIRS:** We have the machinery, get the machinery to work and all Chapters will flourish. **PUBLIC RELATIONS:** In the public's mind our profession becomes worthy of serious recognition in direct proportion to the individual architect's interest in his profession. **COMMUNITY DEVELOPMENT:** The time for educating the public to the need for planning, zoning, redevelopment, workable and uniform codes is now. **RESEARCH:** Such activity is in the scope of our responsibilities to ourselves and to the building industry. **LEGISLATION:** We are not interested in legislating ourselves into business but are determined to preserve and elevate standards. **FLORIDA AS A NEW AREA REGION:** We shall continue to perform all acts necessary to win ignominious defeat on our part in The Institute.

work and all Chapters will flourish.

### Education

Today we can look back on a long list of achievements in the field of education. Our relationship with the University of Florida is very close. We have provided loan funds for stipends and student awards. We have successfully promoted, along with the University of Florida, the teaching of architecture in the state of Florida. However, the field is huge and much more can be done.

We can do more to coordinate the recruitment programs. Institute pamphlets should be made available to every high school in the State of Florida and a coordinated, well planned speakers bureau can cover every high school during "Career Week," if only for several months before graduation.

More post-graduate education can be used. It is just as important that the practicing architect keep abreast of current doctrine and techniques as it is for students of architecture. A traveling seminar visiting each Chapter once a year can be of considerable value, if properly planned and imaginatively conceived and executed. Such seminars can acquaint architects with the latest in building techniques for office procedure, as well as new planning and structural techniques.

We should issue an effort to have

a course in architecture rather for every level of education, from kindergarten through College and graduate study taught in the schools of the State.

### Public Relations

We have accepted the premise that the public relations program is up to the individual, but he shall do the best possible job; the projects assigned him to do, maintaining the highest of professional conduct, and that he devote some of his time to explaining the profession to the public. This premise does not preclude guidance, education and coordination of individual effort.

We have Chapters who have done excellent work in public relations; some have done little. Some need a good job interpreting our profession to laymen: officers, not.

and we must learn what the public thinks about us. This can be done by having a survey made, or by acquiring surveys made in areas of interest.

Through the use of workshops with capable leaders the experience of various individuals and chapters can be discussed and evaluated for the benefit of all.

Armed with the knowledge of what people think of us, techniques can be devised that will aim at their attitudes. Techniques should be emphasized to do the job that they want to do. We can devise consistent replies for the stock

questions asked by the layman concerning our profession. Then the non-favorable assessment of answers will be given and the public will be readily understood as neighbor can check with neighbor and come up with the same answer. Perhaps a handbook on Public Relations for Architects is in order.

In discussing public relations, the Administration is aware that architects are public too. To maintain a strong F.A. for promoting the interests of individuals, it is imperative that the Administration to show Florida architects the importance of active participation in their groups such as those on Chapter, State and Institute levels. In the public's mind our profession becomes worthy of serious recognition in direct proportion to the individual architect's interest in his profession.

As it is necessary to get the story of architecture to every segment of society, so is it necessary for every community activity to feel the presence of architects. Effort should be made to encourage architects to fill vacancies on every board or committee concerned with architecture planning, zoning, the arts, and other related fields. Public Relations committees should be organized in every community to act as a liaison between the architect and the community. It is the duty of the architect to be on such boards or committees as (Continued on Page 14)

architect should be urged to fill the vacuum and a campaign instituted for his appointment.

### **Relations With the Construction Industry**

The FAA has established a good working relationship with the cooperative groups of the building industry. The Joint Cooperative Committee FAA-A.C.C.-FES has set for itself goals of great significance for the industry in the State. FAA will continue to give leadership and active assistance in achieving these goals and introducing new ones in this cooperative effort.

As important as the Joint Cooperative Committee work is we wish not be so involved with its goals that we forget the many segments of the industry with which architects are working constantly, but with which we do not work on an association level. We must be alert to the opportunities as they arise, to the welding of all elements of the construction industry into an organization which can be representative of the whole industry. In such opportunity arises in 1958, the FAA must work for unity of the industry.

### **Cooperation with Design Professions**

Our relationship with the design professions has been well established with engineers. Whether this is because the engineers are the only designers with whom we have problems, or not, is not readily apparent. We shall expand our relations with the other design professions, if for no other reason than the needs of our public relations program.

### **Community Development**

The FAA made a start last year in showing the people of our state our interest and concern in community planning problems by active participation in the Florida Planning and Zoning Association. The 1957 president of FPZA, Kenneth Jacobson, an active member of our organization has been reelected. We shall see him and the FPZA program renewed vigor this year.

We can do more. The time for educating the public to the need for planning, zoning, redevelopment

workable and uniform codes is now. We must encourage and give leadership in the initiation of organizations and programs for the happy development of our communities. Many of our members and some of our Chapters are now actively engaged in this type of leadership. We can render them assistance and learn from them how similar leadership can be applied to other communities.

### **Research**

Last year the FAA indicated that it recognized its obligation to the profession and the building industry to conduct research for the improvement of service to the public. This was done by expressing an interest and promoting participation in the formulation of an organization of interested elements of the building industry into a Florida Foundation for the Advancement of Building.

The importance of research in all the phases of our professional activities is recognized. That there is no agency now actively engaged in research of problems peculiar to Florida building design and methods is indication that more effort must be made to the end of attaining such agency. Our interest in the organization of FIAB should go further than participation. We should become an active promoter of its organization and leader of its activities. Such activity is in the scope of our

obligation from those predecessors of our profession who have passed on to us benefits of their research often without recognition or reward.

### **Membership**

We have made rapid strides to the ultimate goal of enrolling as members, all architects in good professional standing, registered in the State of Florida. We shall not relax in our efforts to seek eligible individuals for the attainment of our goal.

### **Legislation**

The 1957 "experience" with our Executive Director as our representa-

the direction for organizing a better vehicle for expressing our opinions on legislative matters concerning with our profession. In 1958 we have a "quiet" year in which to organize machinery in this new direction in

preparation for the next Session. The program envisions the participation of every member in a general way with many delegated specific responsibilities. The program will be directed by various Commissions, Boards and Departments of the State Government as well as every Legislator, to

interested in legislating ourselves into business, but that we are determined to preserve and/or elevate standards and that we can and are available to aid and assist in all matters related to our profession.

### **Florida, a District of The AIA**

Our application for a responsible place in The Institute organization as a new regional district is before The Institute for acceptance. We shall continue to perform all acts necessary to win favorable action on our suit to The Institute. In anticipation of favorable action and to prepare for the timely acceptance of the duties of a Regional District of the AIA we should prepare the necessary revision to the By-Laws and Constitution ready for their enactment, should our desire become a reality. Our claim to responsible leadership in The Institute will be greatly influenced by our department at the 1958 Regional Convention of the South Atlantic District in Sarasota.

We must do all we can to make it a success and to demonstrate our vigor and our unselfish concern for all problems related to our profession.

This outline of program for 1958 is not too ambitious for an organization of the strength and high purpose such as the FAA.

The year has been called the year of destiny because I am very conscious of the pressure of events that channel our activities in new directions. For 43 years FAA has prepared itself to meet the new horizons, the new responsibilities urged upon it and we accept them with confidence. With a little effort from each member properly coordinated we can shape our destiny and accomplish much.

Our History not shown us that great things are done by a few determined people? We are few and we are determined, organized people strongly organized. I am privileged and proud to give leadership to such a group.

# Florida South

By RYAN S. KORACH, AIA

President

Following a centennial year of progress and achievement, Florida South Chapter is proud to be the co-sponsor of a planned program for expansion of services to our members and the community.

With an active chapter of 190 members, we must first provide the opportunity for closer personal relations and to benefit from interchange of ideas. This we hope to accomplish through stimulating and thought-provoking programs at meetings and possible additional get-togethers for semi-annual.

With the creation of a permanent headquarters in the new duPont Plaza Building, we will now have a clearing house for information and quick dissemination of chapter news. Here also we plan to sponsor and display architectural exhibits and those of related arts. More interest in FAA has been shown by our members as evidenced by attendance at the recent convention and the establishment of FAA offices with our chapter area should further strengthen ties of relationship.

AIA public relations become top

priority in chapter needs. Our committee must better acquaint the public with the services and responsibility of the architect and the functions he performs in the pattern of our growing cities. We know that individual architects are playing important roles in community life and that this must be highlighted so that our younger and newer members can be indoctrinated in public affairs.

At long last Dale County has a unified building code and we feel proud of our hard working architects who played a major part in its conception. However its adoption, enforcement and revisions as to being about, are vital to our profession. We must make certain that the industry can derive the benefits of these standards.

Our close association with the University of Florida College of Architecture and Fine Arts has brought about a scholarship fund for students as furtherance of school projects. Our committee on education will continue and expand this project.

The fine relations between the

chapter and the construction industry is expressed by our awards to the craftsmen, who translate our plans to reality and whose outstanding work merits recognition. This year our awards committee will plan to foster the creation in community recognition for structures of architectural design.

Each year has brought more responsibility in Florida South's share of participation in national and state affairs. We will continue to work with state and city administration. This year we intend to point all effort to make AIA a leader in our community.

# Florida Central

By ROBERT H. LEVISON, AIA

President

1958 — The First Year of The Future — The Florida Central Chapter to be a year of renewed effort in every respect.

We will strive to elevate even further the standard of ethical practice among our members and hope to further their understanding with respect to the responsibilities and obligations incurred by them as Architects. We hope to enhance public relations by bringing a better understanding to the public in general of the value of the service of an Architect, no matter how small the project.

It is our aim to strive for closer cooperation between Chapter Committees and Vertical Committees of

the State and National Organizations in order to bring our profession, with our common effort to the direction of initiating, at Chapter level, programs which may be of benefit to the entire State Region.

Chapter meetings will be devoted continuing seminars on technical and topics with a special emphasis placed in cooperation with the remainder of the industry regarding other new ideas which may raise the standard of practice in the future.

The Regional Conference, to be held in Sarasota for three days from April 24th to 26th, 1958, will be a most undertaking for the members of the Chapter with the

aim of each member to let the whole region know more about the 'Magic State' in which we live. The Conference under the able leadership

(Continued on Page 22)

# Elegance--Here it grew from simplicity...

This is the home of Andrew Furuseth, Fairport, Ferdinand, Shedd and Burdette, Architects, of Miami, and he designed it as he did for three strand reasons. First, he wanted to capture within it the placid beauty of a lake shore site and the utmost perfection of simplicity. Second, he wanted both comfort and convenience to live along with the outdoor beauty. Third, he wanted flexibility of both space and privacy to serve the varied needs and interests of an active, no-gregarious family.

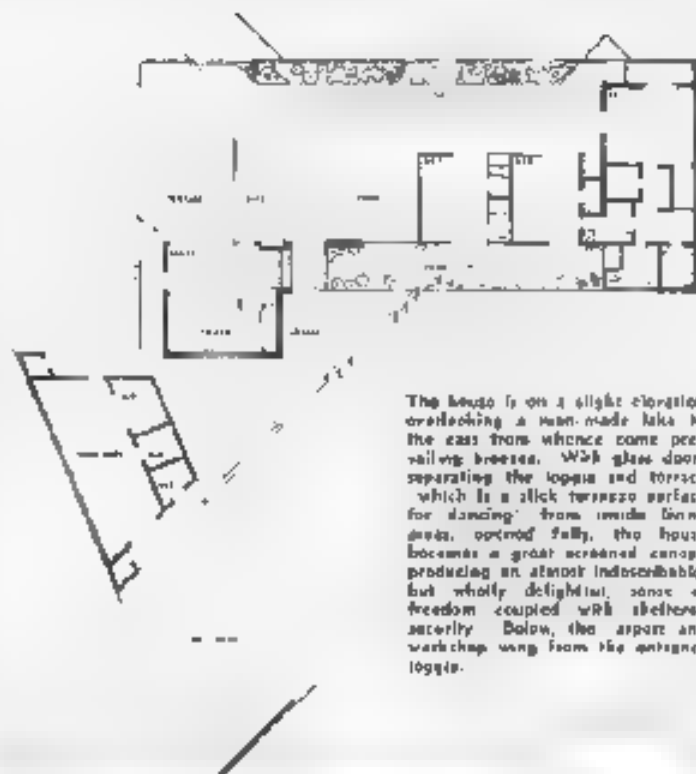

Evidence that he got what he wanted is shown in that he was permitted to make time out by host, the Miami Convention Center for a night enough to have visited the Furuseth home during the 1956 conference closing, September, Night.

The all beauty of the air, bordered trees and ornamentals seen on either the house is shut out only by glass and a few, and walls where the design bowed to the joys of personal privacy. The weather, softness in certain exposure, and the requirements of the life and equipment. As well, the house seems like a group for the breeze for two of its walls are entirely of glass and the others are in complete or the the the face and completely open character.

Actually, too, this house seems a great deal larger than it is because of too open the air, also because with glass doors, windows and a well screened loggia and terrace by way of extension of the living space and a dining area, which is an idea for such dining as it is for covering an uncomfortable terrace for use of personal effort for it.

The illusion of size is furthered by a shrewd and sensitive use of materials. The dark floor of dining living and area, carry through on the screen loggia terrace, is like, for example, an

*Continued on Page 22*

The house is on a slight elevation overlooking a man-made lake to the east from whence come prevailing breezes. With glass doors separating the loggia and terrace which is a slick terrace surface for dancing from inside living areas, opened fully, the house becomes a great screened canopy producing an almost indescribable but wholly delightful sense of freedom coupled with sheltered security. Below, the aspect and workshop view from the entrance loggia.

8

THE LONILA ARCHITECT

"Let us not suppose we were ever intruded upon," he said, and he began to tell his family the story of the visit. He said that he had been told that the house was in the hands of the enemy. He said that he had been told that the house was in the hands of the enemy. He said that he had been told that the house was in the hands of the enemy.

## The Case of the Wire-Haired Octoplugs\*

no wires were tangled and covered. The double outlet in the kitchen had double outlet plug after all in a day's time what a mess.

As each woman has to need to plug so all lamps or appliances into one wall outlet may be a little bit of a problem for you. But don't worry, we have a solution for you. Our new housepower system accommodates your multiple loads and power requirements. The answer makes our plug people.

### FULL HOUSEPOWER

100-200 AMP

A full housepower

# The Triennale of Milan...

An exhibition to anticipate and to remember

By EMILY V. OBST, AIA

Every three years since 1901, Milan has produced the Triennale, an international exhibition of modern and industrial art and architecture. I was most fortunate in being able to attend it in 1963, and I seen nothing else in the world that would have been so worthwhile.

The current Triennale was a triumph, was captured by some of the outstanding architects, engineers and industrial designers in the world.

The Triennale was a triumph, was captured by some of the outstanding architects, engineers and industrial designers in the world.

The Triennale was a triumph, was captured by some of the outstanding architects, engineers and industrial designers in the world.

Of the many collaborations, its theme was bipartite: 1. the relations between the arts; 2. contemporary architecture and industrial design (a phrase that has been absorbed intact into the Italian vocabulary). The aim of the Triennale to show the interrelation between these three facets was successfully accomplished.

The Triennale was a triumph, was captured by some of the outstanding architects, engineers and industrial designers in the world.

The main approach through the park Viale Alemagna, was covered with a canopy whose height varied from 10 to 20 feet. The old building of the Palazzo had been masked skillfully.

The Triennale was a triumph, was captured by some of the outstanding architects, engineers and industrial designers in the world.

The Triennale was a triumph, was captured by some of the outstanding architects, engineers and industrial designers in the world.

The Triennale was a triumph, was captured by some of the outstanding architects, engineers and industrial designers in the world.

The Triennale was a triumph, was captured by some of the outstanding architects, engineers and industrial designers in the world.

The Triennale from the air. Most of the major exhibits showcasing modern architecture, art and industrial design were housed in the Palazzo dell'Arte at Pavia, others were displayed in structures erected for the purpose—as the group including Gaudin's Dome at R. Sestomonte Pavia, upper left in picture.

in architecture, described as "post-modern" and "modernist" architecture.

The Triennale was a triumph, was captured by some of the outstanding architects, engineers and industrial designers in the world.

The Triennale was a triumph, was captured by some of the outstanding architects, engineers and industrial designers in the world.

temporary housing projects. One was a "modernist" housing project.

The Triennale was a triumph, was captured by some of the outstanding architects, engineers and industrial designers in the world.

The Triennale was a triumph, was captured by some of the outstanding architects, engineers and industrial designers in the world.

### The Trennle . . .

<sup>21</sup> measured from <sup>22</sup>page 112.

industrial art glassware connects, however, both Italian and of the other exhibiting nations.

The International Show of Interiors is held in a new 30,000 sq ft purpose-built exhibition hall of reinforced concrete and steel channels, at which had been erected for exhibitions by the various countries, including, among others, Germany, Brazil, Sweden, and Italy, a display of national and export of furniture. Nearby was the United States pavilion, architect Paul R. Polak's pavilion, and the future exhibition building.

Each of the above mentioned countries displayed its furniture and mode of living within one of these pavilions. The furnishings and way of life were similar expressing the time of the twentieth century rather than the geographical differences of place. The spirit of the United States was about the heart of demonstration.

The pavilion designed by architect Gio Ponti was actually a small house apartment, constructed of polystyrene without concrete of translucent character and containing an exhibit of furnishings and accessories.

haused in a geodesic structure by R  
Be  $R \times_{\text{new}} P = X$ . The over-  
ing most exciting, the exhibit is no  
opinion, very dull.

The architect of Milano designed the interior as consisting of a living room, a dining room, and bath. The exterior walls are of travertine.

vitreous enamel, polychrome, with deep blue glazes and a cameo glass effect. Inside were handbags and a glass bookcase, also designed by Pop.

On the second floor of the Palazzo, sixteen countries displayed individual exhibits of their national arts including furniture, textiles, ceramics, etc. The most striking were, objectively, unimpressive. The Swedish exhibit consisted of mass-produced wood furniture from the aluminum-producing city Kramfors. Functional, beautifully designed in the Scandinavian tradition and well constructed furniture from Kramfors should become widely known and used in the near future.

In my opinion, the best exhibit in this particular section was that of Japan. The large room was turned into a garden with a pebble floor, winding walks, and subdued lighting emanating from sources hidden in wood cubes placed on the floor. Various shaped holes in these fixtures allowed the direct emission of light. Japan's exhibits shown were few, but there was one particularly distinctive. The most striking exhibit was that of a very large gardener. That which seemed to be barren fruit on long stems, was, on close examination, a mass of brown porcelain electrical insulators. Also exhibited as a structural sculpture was a gigantic white porcelain electrical insulator.

wish that space permitted us to describe each exhibit in detail. The Eleventh Triennial, closed in November, 1957. But in a way it is now there will be a world map and every architect should plan to visit it for education and inspiration.

This is the Yugoslavian section of the International Home Show.

## Florida Central . . .

(Continued from Page 12)

of Colonel ROLAND W. STANLEY will deal with subjects of vital interest to all who live within the borders of the South Atlantic District and the importance of preserving the role of the Architect to the public will be stressed. With this in mind, for the first time in the history of the Annual Event, a Conference Director has been appointed. Mr. GERRIT WATERMAN of Sarasota has been named to this position and one of his most important functions will be that of providing information to the public on the Conference and the work of Architects in the Region. The Conference will be conducted on an informal delegate-participation basis with emphasis on sharing knowledge and experience. There will be three exhibits during the Conference: Manufacturers, Architectural, and Students. The Architect's responsibility to his community during the coming period of great regional growth will be spoken on at length.

See you in Sarasota in April.

### LAMINATED CONSTRUCTION!

For the past quarter century Unit Structures, Inc. has pioneered in the development of functional, fire-resistant schools. It is a proven fact that laminated wood structural members are safer in case of fire — no chance of sudden collapse which can so easily happen with other unprotected structural materials — and that is only part of the story. The true economy which is achieved through the use of Unit laminated wood construction is essential in today's budget-conscious building programs.

Remember, too, that the natural beauty and warmth of the wood never be duplicated by any other material.

THE FLORIDA ARCHITECT

# Florida North Central

By FORREST R. COXEN, AIA  
President

The coming year may not be the most important or essential one that the Tallahassee area is to have. It is hoped, however, that it will be one which each member will remember as having contributed to at least one local project or event. The first step in obtaining a strong, active chapter is to obtain the individual interest of each member and it is with this thought in mind that chapter activities for the coming year have been programmed.

One of several plans adopted to increase participation of the membership is a "buddy" scheme of assigning a younger associate member to be the assistant of each elected chapter officer. We believe this will take some of the routine work load from the older corporate member and at the same time give the associate feeling of responsibility to the chapter. This will, in effect, give desired to each member.

A third way up the ladder and could possibly keep the blue corporate man "dropping the ball" on certain items of chapter business, as has been the case in the past.

It is planned to have a corporate member audit of the chapter's dues by the end of the first month of the year in order to give the state organization as well as our local chapter spending funds for the year. Also, in line with this, there will be a drive for new members in the area, and a reworking of the duties of each man with the idea of raising his chapter classification.

As was mentioned earlier, our chapter has suffered from a lack of operating funds, and a coordinated budget and by-laws committee will be formed to study this problem.

The Florida North Central Chapter is not the newest chapter in the state, having been formed in 1946.

However, it is probably one of the smallest and because of its size has not been able to perform in the professions or social circle as its many big brothers throughout the state.

This year's activities will be centered around our University of Florida Traveling Exhibit, a joint meeting with a local contractor's group, the sponsorship of an Architect's bowling team, and other activities.

# Palm Beach

By FREDERICK W. KESSLER, AIA  
President

As we start another new year we realize more than ever the tremendously expanding area in which we live, and the challenge for good planning and progressive architecture for this area is more than ever present. This challenge will call for a great thought and hard work on the part of all of us and will be one of our major aims in this chapter for 1958.

By now most communities in the territory of the Palm Beach chapter have adopted the Southern Building Code with their own slight variations. During the past year the badly needed Palm Beach County Zoning came into effect, after much thought and hard work. With this also came the County Building Code.

This is particularly important in view of prospective county expansion and will result in a much more orderly

growth. In this our Architects will during the coming year play an increasingly valuable part.

Several of our members again this year will be rendering service to our several communities by serving on various city boards, such as Planning Zoning, Contractor's Licensing, Building Board of Appeals and Parks and Recreation.

For the coming year we hope to be able to increase our chapter

attendance at meetings and thereby gain in stature through a greater exchange of ideas. In line with this, we are planning an intensive local and informative technical programs. We also expect to provide many social meetings for the sake of good fellowship.

We wish to obtain better public relations through our work and hope each project will reflect the valued services of the Architect. During past years our good relations with the construction industry as a whole have been largely due to a very active Joint Cooperative Committee. We wish to further and better this project.

Two of our members, George Voss and Donald Edge, have recently volunteered to teach prospective draftsmen and other interested persons in allied fields at the Palm Beach Vocational School. This program, we hope, will continue through the new year.

With continued support of our normally active Corporate Members, the Junior Associates, and our excellent state of Officers and Directors we feel that much good work will be accomplished during 1958.

## Florida North

By **McMILLAN H. JOHNSON, AIA**  
President

The Florida North Chapter is now going into their 10th year. In the past 10 years, they have been able to do a lot of good for the community. They have been able to help a lot of people who are in need of help. They have been able to help a lot of people who are in need of help. They have been able to help a lot of people who are in need of help.

The excellent chapter accomplishes its purpose by the end of the year under past president A. Cassanova, an planned, he estimates until 1990. The total cost of the program is to be the awarding of educational medals to individuals who through the program are being recognized for their service to mankind. A number

public-mindedness or other character traits that can be shown to be different, even, at persons wishing such recognition.

[illegible]

the AIA can provide for not less than 10% of the total number of seats for which suitable publicity will be arranged in the Public Relations Committee.

his chapter's schedule of monthly meetings in Mexico and Argentina to be a continuous one, however, he may prefer continuing to work on programming in which aspects of culture and social and political life are the most important to the people of each country. He may also be interested in some of the other issues and community problems that he would like to highlight in the future.

He stated again that he was in the United States for the purpose of a tour through the United States and will have no contact with any one in Germany. His management is considered to be of importance since the loss of his property would be considerable and he would have to fight a long war against selling the remainder of his valuable assets to the U.S.

# Fla. Central Auxiliary

MRS. ALMA L. PARISH  
President

So it was at the last Auxiliary of the Florida Central Chapter of the American Institute of Architects was being prepared by a few of our business associates in expanding into six and including ten in addition each year to young members and to enable Mrs. Architect to know what goes on and why.

Through the Auxiliary, a type of activity has been found for Mrs. Architect. At regular intervals, in addition to committee members, there may be a discussion of some phase of Architecture and the Third Act or perhaps a dramatic play. Public Relations has been secured since Mrs. Architect has been heard from.

Organization is the most important of our earlier meetings, under the leadership of Mrs. A. W. S. 1949, of the and in the President, to bring it on together from the Florida group. Despite all this, the Auxiliary owes a debt to the Florida Chapter of Architects, the past President has put it all on the table and we have to be more than satisfied in terms of a chapter for the future with the all of it and promise that we will be heard from.

JANUARY 1953

## Quality Guaranteed...

Fine materials and fine workmanship are the basic guarantees behind every Thompson quality door. In beautifully figured gum lauan and birch, Thompson flush doors can be specified for both exteriors and interiors in both standard and special sizes.

### 7 PLY CONSTRUCTION

Lightweight but sturdy Thompson flush doors are ruled for their rigidity and resistance to warping and twisting. This quality is the result of high manufacturing standards that include cores of wood ribs spaced 4 inches apart and buffed against ribs on alternate sides, provide outstanding vent space while at the same time maintain width of 4 1/2 inches. 2 1/2 inch wide panels of 3 ply non-banded plywood, hardware, acid and lock blocks 4 inches wide 10 inches long centered on both sides. Only non-shrinking latex resistant adhesives are used to produce integrated bonding that is highly resistant to both moisture and mold.

In addition to 8 standard sizes—16 x 5, 8 to 24 x 6 1/2 interior and 2 1/2 x 6 1/2 to 24 x 7 1/2 exterior, Thompson flush doors are available in special sizes.

### "ERRORS & OMISSIONS"

We are sorry indeed that a message from the President of the Florida Northwest Chapter, ALC could not be included with others in this issue. Circumstances made it impossible for President William Stewart Morrison to get his picture and copy to us to meet a publication deadline. We hope both can appear at part of the February issue.

## A New Century

Received 10 April 1998

boys punching right here. But before doing so, I will tell you about the new gent in town who has just moved to the Board of Directors where he has been a member for some time. He has been elected to the new and working S. S. and S. S. as member of the Board. He is an excellent representative of the South and the South American Region. He will be able to advance the interests of the State and Region out of the industry as well.

[illegible]

THE FLORIDA ARCHITECT

comprehensive, authoritative force and voice of the architectural profession and as a dominant factor in the construction industry in the U. S."

The Board directed me to appoint a special committee to study and recommend policies whereby this objective can be reached. Logically, falling within the purview of this new committee are such subjects as the status of the Institute vis-a-vis education, licensing and accrediting; membership structure; types and extent of service rendered by the Institute to its membership and to the public; and relationships with other professional and non-professional groups concerned with the construction industry.

In establishing this committee we are not seeking a routine checkup and approval of the status quo, nor are we looking for a blue-sky "out of this world" program. We think there are things that the Institute could and should be doing that would further benefit the profession and the public. We have set a new goal and want the best possible advice on how it can be attained.

## Student Associate Chapter

By WILLIAM R. LYNCH  
President

Here in Gainesville, the student associate members are still talking about the Convention in Clearwater. For most of us, it was our first convention, and we were greatly impressed. We had imagined that a bunch of "old fogies" would probably be wringing out dry speeches all day long, and were greatly relieved to find it the very invigorating function that it was.

This discovery leads me to what I hope will be our theme for many years to come. We have a growing consciousness of the importance of the professional nature of architectural practice. Making professional acquaintances and exchanging ideas with other architects are the processes that will greatly advance the standards of architectural education, training, and the profession. Recognizing this as the task toward which we can best direct ourselves through the Student Chapter, we are ambitiously writing a vigorous program for the coming year.

But simply to outline the projects under way would be inadequate. The real significance of all of our activity stems from the awareness that is developing within us toward profes-

sional responsibilities. We are finding that the social aspects of the chapter are important, but are rightfully eclipsed by the more important concern for enlarging the students' understanding of the present and future scope of architectural practice. Through efforts, on and off campus, this will be our central theme.

Our next step should include a major collaboration with parent organizations on informal levels for planning future activities.

## FAA'S 1957 President Gets Design Award

EDGAR S. WORTHINGTON, AIA, of Lake Worth, the immediate Past President of the FAA, is the first Florida architect named as a recipient of the "Miami Window Fenestration Award." Here he is shown with Sammy C. Krawinkel, Jr., president and general manager of the Miami Window Company which sponsored the award program. An engraved stainless steel plaque was given Worthington for his design of the Palm Beach County Junior High School.

The Award program was started by the company "... to recognize outstanding design; to stimulate the art of scientific fenestration; and to suggest improved solutions to all types of fenestration problems."

THE FLORIDA ARCHITECT

## Ornamental Barandas

These are the grille tile of hard, fired clay we import from Venezuela. They're somewhat lighter in color and more delicate in scale than those from Panama. But they have the same sort of slight color variations and occasional kiln markings that make for a restly beautiful texture in the finished wall.

# this SCHOOL'S OUT... and out plenty...

It's not dollars... plenty of dollars annually in needless window maintenance expense. Too many school boards overlook the importance of window maintenance costs in annual budgets. In working with your architect in specifying MIAMI windows the savings effected in maintenance costs could enable him to provide additional school facilities.

MIAMI the "top" all-aluminum window in the school field, represents the nation's outstanding window investment. Superbly engineered and designed, and expertly built, its installation in schools throughout the country has proven over the years that maintenance costs are practically non-existent.

The exclusive MIAMI balance bar operator is built to function perfectly and to withstand years of the hardest usage. MIAMI window's triple weatherstripping and tight locking vents eliminate air infiltration, greatly reducing heating and air conditioning expense. Every MIAMI WINDOW is fully guaranteed in writing... your assurance of complete satisfaction.

IT Pays TO SPECIFY **miami** WINDOWS
